Creating two threads

```java
class DisplayThread extends Threads {
    private String message;
    private int interval;
    private boolean running = true;
    public DisplayThread (String message, int interval)
        this. message = message;
        this. interval = interval;
    }
    public void run () {
        while (running) {
            System.out. println (message);
            try {
                Thread. sleep (interval);
            }
            catch (InterruptedException) {
                e. printstackTrace ();
            }
        }
    }
    public void stopThread () {
        running = false;
    }
}
public class Thread2 {
    public static void main (String [] args) {

        DisplayThread bmsThread = new Display
                    Thread ("BMS College of Engineering",
                    1000);
```

```
Display Thread cseThread = new Display
                Thread ("cse", 2000);
    bmsThread .start();
    cseThread .start();
    System.out.println (" Press Enter to stop thread..");
    try {
            System.in.read();
    }
    catch (Exception e) {
            e.printStackTrace();
    }
    bms.Thread.stopThread();
    cseThread.stopThread();
    }

}
```

Output:-

BMS College of Engineering
CSE
CSE
CSE
CSE
CSE
BMS College of Engineering
CSE
CSE
CSE
CSE
BMS College of Engineering
CSE
CSE
CSE
